

## Values for Tile Professionals

Tileware is pleased to introduce an installation system designed and engineered specifically for tile mechanics. Traditional hardware installation requires drilling, compromising tile installations. Now, with the PermaTile™ System, tile mechanics have a clear advantage: a simple installation system that adds value to the tile professional and their specialized skill set.

- Designed specifically for tile professionals
- Encourages quick turnaround where shelving is required
- Eliminates failures resulting from drilling into completed tile work—such as puncturing waterproofing, tile breakage, plumbing and wiring intrusions
- Eliminates the need for wood blocking behind the wall
- Installation can occur within the body of a tile or a grout joint
- Basket mounting can occur immediately after grouting—no special trips
- Learn how to install in minutes
- No special tools required

INNOVATE ▶ ENGINEER ▶ CONNECT

Integration offers endless opportunities for the tile community. Innovation has just begun, TileWare is in the process of engineering new and creative applications. Each iteration expands the usefulness and function of tile and primes the industry at large for growth. Let's embrace the connection with inventive surfaces and cover the world with TILE.

## It's Time to Integrate

Is it possible to experience a modest revolution while integrating tile and hardware? The answer to that question, from TileWare's perspective, is a definitive YES! These two industries have been separated long enough; it's time for a comprehensive solution, one that will serve both tile and hardware communities alike.

### New Solutions for Old Problems

The hardware industry has been asking tile professionals to drill through finished tile surfaces in an effort to attach all types of accessory applications. These archaic methods have been met with little opposition, even though the tile industry has developed significant advancements in both tile and mortar systems. This truth is specifically relevant when mechanics try to drill through solid body porcelain that has been engineered for density and hardness.

From a tile installation perspective, drilling into finished tile work will most certainly create problems. These problems translate into cracked tile, pierced plumbing, damaged electrical wiring and, most significantly, waterproofing violations.

**TileWare, through its PermaTile™ System, offers an innovative solution to obsolete installation methods that require penetration and intrusion into tile and mortar.**

## PERMATILE™ FASTENERS

*The first non-penetrating, non-intrusive tile fastening system*

This high quality, stainless steel fastening component will attach with unprecedented strength to wall surfaces with latex modified mortar. This system provides a solution that is simple and measurably strong. PermaTile™ Systems will end unnecessary damages resulting from drilling finished tile work.

- Will not violate waterproofing, plumbing or wiring—no more drilling
- Mortar-based fastening system
- Non-corrosive stainless steel fastener
- Over 10X the strength of standard fastener
- Tested by TCNA (Tile Council of North America)
- Designed specifically for tile applications by tile installers
- Will work with all standard tile products and thicknesses

## PROMESSA™ SERIES BASKETS

Our baskets have a distinctive look and one touch demonstrates their fine quality. All baskets are designed to fit a broad style palette and will work with any tile motif and pattern.

- Accessories that stay firmly mounted, even with everyday use
- Solid brass
- Each model is easily interchangeable
- 5-year finish warranty

All models are available in all finishes.

Small Soap Basket  
T100-001  
Shown in  
Polished Chrome (PC)

Large Shampoo Basket  
T100-002  
Shown in  
Oil Rub Bronze (ORB)

Shallow Corner Basket  
T100-003  
Shown in  
Brushed Nickel (BN)

Deep Corner Basket  
T100-004  
Shown in  
Polished Brass (PVD)
